THE
REPORT
OF THE

Physicians and Surgeons,

Commanded to assist

At the DISSECTING
The BODY, &c.

IT having pleas'd Almighty God to
put an end to the Glorious Life of
his Late Majesty King William III:
The Right Honorable the Lord Chamber-
lain issued out his Summons to such Physicians
and Surgeons as his Lordship thought
fit,

fit, appointing them to meet at Kensington, and there to Examine by Dissection into the State and Condition of the Royal Body. The day after the Dissection, the said Physicians and Surgeons being met together again in order to the forming an account of what they had observed, Sir Thomas Millington, Sir Richard Blackmore and Doctor Hannes were deputed as a Committee to draw up the Report; which they did accordingly. This R E P O R T was afterwards sign'd by Them, and by the rest of the Physicians and Surgeons, and is as follows.

Surface of the
Body.

I. Upon viewing the Body, before Dissection, the following appearances were remarkable.

The Body in general was much emaciated.

Both the Leggs up to the Knees
and

and a little higher, as also the *Right Hand* and *Arm* as far as the *Elbow* were considerably swell'd.

There was likewise on the *Left Thigh*, near the *Hip*, a *Bladder* full of water, as big as a small *Pullets Egg*, resembling a *Blane*.

2. Upon opening the *Belly*, the *Belly*. *Gutts* were found of a *Livid Color*; and the *Blood* contain'd in their vessels, *Black*.

The *Gutt* called *Ileon* had in some places the marks of a slight *Inflammation*.

The *Stomack*, *Pancreas*, *Mesentery*, *Liver*, *Gall-bladder*, *Spleen*, and *Kidneys* were all found and without fault.

3. In the *Thorax*, or *Chest*, we observed that the *Right side* of the *Lungs* adher'd to the *Pleura*; and the *Left*, much more: From which, upon separation, there issued forth a quantity of purulent or frothy *Serum*. The

500. The *Upper Lobe* on the *Left* side of the *Lungs*, and the part of the *Pleura* next to it were *Inflamed* to a degree of *Mortification*. AND THIS WE LOOK UPON AS THE IMMEDIATE CAUSE OF THE KING'S DEATH.

From the *Ventricles* of the *Heart* and the *Greater Bloodvessels* arising out of them, were taken several large, tough, fleshlike substances of the kind call'd *Polypus*.

The *Heart* it self was of the smaller size ; but firm, and strong.

Collar-Bone.

4. Upon laying bare the *Right Collar-Bone*, we found it had been broken near the *Shoulder* ; and well set. Some *extravasated Blood* was lodged above and below the *Fracture*.

Brain.

5. The *Brain* was perfectly sound and without any sign of distemper.

'Tis

6. 'Tis very rare to find a *Body* Mass of Blood. with so little Blood, as was seen in *This* : there being more found in the *Lungs*, than in *All the Parts*, besides, put together.

Doctors present.

Surgeons present.

Sir <i>Rich. Blackmore.</i>	Mr. <i>Bernard.</i>
Sir <i>Theod. Colladon.</i>	Mr. <i>Cowper.</i>
Doctor <i>Hannes.</i>	Mr. <i>Gardner...</i>
Doctor <i>Harrel.</i>	Mr. <i>Ronjat. &c.</i>
Doctor <i>How.</i>	
Doctor <i>Hutten.</i>	
Doctor <i>Laurence.</i>	
Sir <i>Tho. Millington</i>	
Professor <i>Bidloo. &c.</i>
